The client is a leading provider of Global Telephony Equipments provides solutions for wireline and mobile networks. Their solutions include new 3G services and streamlining of mobile networks, "triple play" of broadband voice, data and video services, amongst many others. They often service large transnational contracts.

Situation:

The US based client got in to a contract to supply products to Power Grid Corporation, India.

Harapa's inventory management system helps US based multinational in on time delivery and optimization of cost.

Power Grid Corporation awarded the Contract to a Lead Logistics Provider for Shipment & also for inventory management. The product was shipped from Finland by air. Warehousing and Distribution of these products to approx

900-1000 project sites pan-India was also assigned to the lead logistics provider. Harapa was to provide visibility and inventory management solution to the client.

Key Challenge:

Optimum inventory level was to be maintained in respective warehouses. Delivery of products to sites was to be done within a span of 24 hours. Also, it was required to give complete visibility of each SKU and documentation involved in the supply chain.

Solution:

In accordance to overcome the above challenges Harapa developed a Preconfigured logistics network in the system for Delivery Optimization. It also developed a tracking and trace system which includes item visibility, exception reporting & billing with reverse logistics. The same provided client with Visibility of inventory status across locations.

Results:

Improved and strategic planning process by Harapa led to on-time delivery of products to PGCIL. It resulted in Visibility in the Supply Chain to all stake holders across the globe. . It resulted in reduced fixed assets and reduced transportation and administration cost. Faster cash-cash cycle time by full control of Logistics operations.
